

Two huge game counts. Two different loops.

The two busiest accounts in our three-year *casual Maia* collection did not play tens of thousands of ordinary full-length games. Public moves and starting boards show how their totals accumulated. Neither pattern establishes who controlled an account or why Lichess later disabled it.

63,504 standard games, account 1	27,506 custom-position games, account 2	91.19% account 1: six plies or fewer	99.99% account 2: exactly one ply
-------------------------------------	---	---	--------------------------------------

Observed in Maia games	scissorsharpness	top1mostplayedgames
Active UTC dates	14 (Sep 8–22)	9 (Apr 28–May 6)
Game setup	Standard, all 1+0	From a chosen position
Dominant ending	99.75% resignation	27,505 checkmates; 1 resignation
Median moves in a game	4 half-moves	1 half-move
Median gap between starts	3.71s	2.09s
Busiest rolling hour	1,667 starts	1,769 starts

1 · Short games, then resign

63,343 games ended by resignation. The account made a median of **2 moves**; the median time between game starts was 3.71 seconds. The 1+0 clock was a limit, not the time each game lasted.

The last-move timestamp may come *before* resignation. Its difference from creation is not exact game duration. [Example game ↗](#)

2 · A position that ends at once

99.99% of these games contain no move by the account. Their opening boards are custom FENs; the most common board was used 10,052 times and the recorded move is **Bxb7#**—Maia's move. [Example game ↗](#)

Most common starting FEN:
rkbq1bnr/pQpppppp/Kp6/1Q6/8/8/PPPPPPPP/RNB2BN
R b - - 0 1. There are 6 initial positions across this account's collected games.

Account 1 · busiest UTC dates

09-19		13,104
09-20		12,287
09-16		8,003
09-21		4,973
09-17		4,647
09-15		3,986
09-13		3,913
09-12		3,136
09-22		2,696
09-18		2,445

Account 2 · busiest UTC dates

05-06		10,054
04-30		5,841
05-05		3,482
05-03		2,579
05-02		2,263
04-29		1,257
05-04		1,248
05-01		488
04-28		294

What the second account actually repeated

Every one of its 27,506 games was tagged fromPosition—23.30% of all collected casual Maia games with that tag. Six exact starting FENs account for the entire set. 27,504 games ended after one half-move, with Maia moving first; the account made no move in those games. Only two games reached three half-moves. A separate chess-rule replay confirms that all 27,505 games marked checkmate end in legal checkmate.

Exact starting board	Games	Most common continuation
Setup 1	10,052	Bxb7#
Setup 2	5,841	Qxb7#
Setup 3	5,330	Qxb7#
Setup 4	3,484	Qxf7#
Setup 5	1,551	Qxb7#
Setup 6	1,248	Bxb7#

The complete FEN strings, moves, and public game IDs are in the compressed data. A repeated setup and rapid cadence may be consistent with scripted challenge creation, but cannot identify how these games were initiated or who initiated them.

Were they banned for breaking the rules? Both public account-API responses returned disabled: true on October 8. They expose no reason. These records cannot establish a moderator ban, cheating, automation, or a Terms-of-Service finding. Lichess [Fair Play](#) distinguishes forbidden programmatic GUI moves from permitted official API methods; the game exports do not identify the input method. [Terms and possible account actions](#)

How to check the claims

01 / Rank Count all published casual Maia records by opponent.	02 / Match Verify all 91,010 selected game IDs against the corpus.	03 / Inspect Read moves, FENs, timestamps, outcomes and clocks from public game JSON.	04 / Replay Validate every custom-position checkmate by chess rules.
--	--	---	--

Scope and reproducibility. Only casual games against official Maia 1, 5 and 9 in the repository's fixed three-year window; not either account's complete Lichess history. Both account-wide user exports returned HTTP 404 at collection time. The two accounts were ranked by all 2,040,728 published casual Maia records; their 91,010 full game JSON objects were recovered by known IDs. The [game data](#), [hashes](#), [definitions and rebuild instructions](#) accompany this page. Public handles are not verified people. Independent research, not a Lichess enforcement decision.
